Subject: RE: Sewage Spills in Tega Cay?

Mr. Lando,

The recycled asphalt material that was placed at the Beach & Swim Center for the overflow parking lot has been removed. There have been numerous case studies showing the levels of heavy metals, PAHs and other volatile organic compounds were no greater than those occurring from natural ground runoff. Because of the complaints we received from residents, we decided to remove the material and relocate to our maintenance facility. I understand that this wasn't the main reason for your email to the representatives of these state agencies, but I felt I needed to address this concern with you. Please let me know if you have any further questions or concerns regarding the Beach & Swim Center.

Sincerely,
Charlie Funderburk
City Manager

Subject: Sewage Spills in Tega Cay?

What is being done to prevent the persistence of Sewage spills but as well curb the problems our endangered Catawba River and Lake Wylie face?

We now have seen numerous sewage spills this year not to mention the numerous in years past. You then add the continued introduction of PCB's from Duke Energy's plants along with the dumping (then removal) of old asphalt near the Tega Cay beach club, along with run off from the new Fort Mill School and you get a lake and river that is not desirable and toxic.

At what point will there be accountability? This is the water we drink, bathe in and swim in. The Catawba River is one of the most endangered rivers and something needs to be done to protect it.

Concerned citizen and resident,

David Lando
